

Island Network Alerter

Secure, reliable, mission critical, network monitoring, and alerting

SECURITY PROTECTION

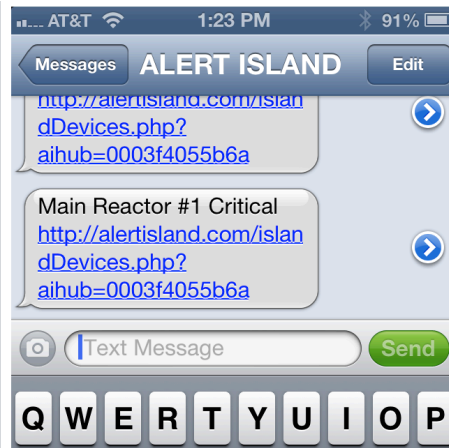

Island Network Alerter enforces network security via our patent pending uni-directional flow technology (data diode). The absence of a physical inbound connection makes sure your island network remains secure.

PEACE OF MIND

Today's network based architectures require the highest level of availability. Immediate knowledge of network or node communication issues is the basis for fast response and quick restoration of functionality.

EASE OF USE

No complex setups here. Just plug INA into the private network (your island) and it goes to work learning what is there and alerting you to what is not. Rest assured if a device disappears you will be alerted with via SMS and email using our Alerts To You® technology.

- Monitor your private network (island) in real-time and receive instant notifications of device loss or unauthorized presence.
- Need multiple alerts? – No problem configure up to 20 alert phone numbers.
- Minimal setup required: You can configure INA in less than 10 minutes via your browser and instantly start monitoring your devices.
- Does your corporate LAN require a proxy for internet access? – No worries, INA is fully configurable for proxy access.
- Require High Availability? – No problem with INA. It employs cloud based technology housed in a state-of-the-art datacenter.

Need to monitor the health of your network devices in real-time? No worries, Island Network Alerter insures that you know instantly that there are network troubles. INA continuously checks the communications health of all devices on a segment (options available for multi-segment) and instantly generates alerts directly to the configured recipients. No complex configuration or management is required; INA is always scanning your network for changes and providing alerts.

Island Network Alerter

Secure, reliable, mission critical, network monitoring, and alerting

Features

- Highly secure uni-directional communications insures your network security is not compromised.
- Compatible with all Ethernet based industrial networks.
- Three user configurable alert levels with 40 potential alert destinations.
- Alerts directly to any connected smart device.
- Direct links embedded in each SMS and email allow you to quickly visualize the problem.
- Auto learn technology requires minimal configuration.
- Monitor up to 7 segments with a single unit.
- Built in WatchDogs allow you to monitor the health of mission critical Windows PCs on your private network.
- Unattended cloud based upgrades insure your system stays up to date with the latest releases.
- Resident heartbeat beacon provides alerting should the island network become unavailable.
- Cloud based technology resident in a state of the art highly reliable datacenter

Options and Pricing

Description	USLP
Island Network Alerter	\$2495.00
Alerter subscription (500 alerts/month)	\$19.00/month
Network snapshots	\$4.95/month
Additional Segments (up to 7)	\$495.00
PC Watch Dog Monitoring (per block of 100)	\$250.00
Broadcast Alerts	\$250.00
Ethernet/IP Tag Alerts	\$495.00
Modbus TCP Tag Alerts	\$495.00
